PROFILE

In my short professional experience, I've worked as an employee and as a manager. I believe that this has highly raised my sense of responsibility towards the working process. I know how to follow the instructions of a leader and I am perfectly capable of making decisions, concerning my personal professional duties. I believe that in the balance between those two abilities lies the key to an efficient working process.

As a manager in a micro company, providing direct services, communication was utterly important for fulfilling my duties. I believe I possess the necessary communication skills as well as the ability to adapt to new and dynamic environments. I am confident that I fit perfectly in every team and working with me would bring synergy to the outcome.

I do not have any technical professional experience in the Software industry yet, but my educational adventure in SoftUni makes me confident that I am a fast learner and I am able to adapt quickly to the dynamic and challenging environment of Information technology. Moreover I have already been part of an R&D team in Maj.io, but in a different role. Which makes me organizationally prepared to step in quickly in the team work.

Driven by my strong motivation and persistency I believe that in short terms I can dive into the nature of the work and become a vital and useful part of every team.
